

Build a Service Agent

Use Template- Agentforce Service Agent

The Agentforce Service Agent template is a pre-configured autonomous Agent **designed to handle high-volume customer inquiries 24/7**. Start with this template to take advantage of out-of-the-box best practice capabilities that allow for rapid deployment and immediate case deflection while seamlessly escalating complex issues to human agents.

Define the Description, Role, and Company

These inputs serve as the primary system prompt that **grounds the Atlas Reasoning Engine in your specific business context and persona**. Precise definitions reduce hallucinations and ensure the agent stays within its scope by explicitly guiding it on who it is representing and exactly what “jobs” it is authorized to perform.

Create the Service Agent User

The Agent user is a **dedicated Salesforce User record** representing the AI. It ensures security by enforcing the principle of least privilege, **restricting the agent’s access to only the specific data and actions necessary for its job**, preventing unauthorized exposure of sensitive information.

salesforce

Lessons Learned

Best Practices

- Optimize for accuracy, deflection, and safe resolution paths
- Strong retrieval from approved knowledge, clear escalation rules
- Auditability: cite sources, capture case notes, avoid hallucinations
- build one topic at a time. Test thoroughly before moving on to the next.
- Verify that the Agent’s User has all of the necessary access including to Knowledge
- Enable enhanced event logs for visibility
- Test thoroughly in the builder

Build a Employee Agent

Use Template- Agentforce Employee Agent

The Agentforce Employee Agent template is a pre-built starting point for deploying internal-facing AI agents tailored to specific employee use cases. Start with this template to take advantage of out-of-the-box best practice capabilities that allow for rapid deployment and immediate case deflection while seamlessly escalating complex issues to human agents.

Define the Description, Role, and Company

These inputs serve as the primary system prompt that **grounds the Atlas Reasoning Engine in your specific business context and persona**. Precise definitions reduce hallucinations and ensure the agent stays within its scope by explicitly guiding it on who it is representing and exactly what “jobs” it is authorized to perform.

Create the Employee Agent User

The Agent user is a **dedicated Salesforce User record** representing the AI. It ensures security by enforcing the principle of least privilege, **restricting the agent’s access to only the specific data and actions necessary for its job**, preventing unauthorized exposure of sensitive information.

Lessons Learned

Best Practices

- Optimize for productivity and policy adherence across internal tools
- Strong identity, permissions, and least-privilege access
- Emphasize “how-to” workflows (IT, HR, ops) with clear boundaries
- Build one topic at a time. Test thoroughly before moving on to the next.
- Verify that the Agent’s User has all of the necessary access including to Knowledge
- Enable enhanced event logs for visibility
- Test thoroughly in the builder before moving on to the Testing Center

Build a Sales Agent

Use Template- Agentforce Sales Agent

The Agentforce Sales Agent template is a pre-configured autonomous agent designed to handle high-volume sales activities across the full pipeline. A Sales Agent in Agentforce helps reps go from lead to close faster by answering questions (pipeline health, next-best accounts), pulling competitive intel, and speeding up account plans in Slack, CRM, or mobile.

Define the Description, Role, and Company

These inputs serve as the primary system prompt that **grounds the Atlas Reasoning Engine in your specific business context and persona**. Precise definitions reduce hallucinations and ensure the agent stays within its scope by explicitly guiding it on who it is representing and exactly what “jobs” it is authorized to perform.

Create the Sales Agent User

The Agent user is a **dedicated Salesforce User record** representing the AI. It ensures security by enforcing the principle of least privilege, **restricting the agent’s access to only the specific data and actions necessary for its job**, preventing unauthorized exposure of sensitive information.

Lessons Learned

Best Practices

- Optimize for speed-to-lead, next-best action, clean handoffs to humans
- Keep prompts grounded in CRM fields (accounts, opps, activity history)
- Tight guardrails on outreach tone, approvals, and compliance
- Build one topic at a time. Test thoroughly before moving on to the next.
- Verify that the Agent’s User has all of the necessary access including to Knowledge
- Enable enhanced event logs for visibility
- Test thoroughly in the builder before moving on to the Testing Center
